Health Advisory

Date: December 18, 2020
To: Yolo County Residents, Employers, and Employees
From: Dr. Aimee Sisson, Health Officer
Subject: Revised Self-Quarantine after Travel

The Health Advisory originally issued on November 19, 2020 is being revised and reissued to incorporate the California Department of Public Health’s updated COVID-19 Quarantine Guidance, which allows a 10-day quarantine period in place of the prior 14-day quarantine period.

Cases of COVID-19 are increasing worldwide, including in the United States, in California, and in Yolo County. However, not all areas are equally impacted by disease increases; currently, California’s COVID-19 prevalence is relatively low compared to other parts of the United States. Based on possible exposure to COVID-19 during their travel, Californians who travel to areas outside California with higher COVID-19 rates pose a risk to California communities when they return to their homes.

On November 13, 2020, the California Department of Public Health (CDPH) issued a Travel Advisory to all Californians. CDPH’s Advisory is a recommendation, not a mandate. The Advisory recommends that anyone arriving in California (including California residents) after non-essential travel to another state or country should self-quarantine for 10 days upon arrival. During this self-quarantine, CDPH recommends that persons limit their interactions to their immediate household.

This Health Advisory is being issued to provide clear guidance to all Yolo County residents, employers, and employees who travel for any reason. In general, travel is discouraged unless absolutely necessary.

The Yolo County Health Officer recommends that any person who returns to Yolo County after travel to a higher-risk area outside of California should quarantine in their place of residence for 10 days upon their return.

- This is a recommendation, not a requirement.
- Individuals should quarantine regardless of the purpose of their travel. The risks presented by essential and non-essential travel are identical.
- Yolo County is currently in the most restrictive Purple tier of the State’s Blueprint for a Safer Economy, and CDPH considers COVID-19 transmission to be widespread in the Purple tier. Most of California’s counties are also currently in the Purple tier. Since Yolo County is at the same risk level as the rest of California, there is no need to quarantine after travel within California.
- Residents, employers, and employees are advised to reference maps of COVID risk level before travel to make informed decisions and upon return from travel to determine the need for
quarantine. Be sure to use a map that presents average daily cases or case rate for the previous one to two weeks, rather than total cases to date, in order to show current risk levels. If the risk level of the destination is higher the risk level in Yolo County, quarantine is recommended. The world and US maps here are user-friendly.

- A negative test during an individual’s quarantine period does not shorten the 10-day quarantine period unless the individual qualifies for the First Exception listed in the Mass Quarantine Order of the Yolo County Public Health Officer.
- Instructions for quarantine are available on the Yolo County website: English, Spanish, Russian.
